EDUCATION

University of the Pacific

Bachelor of Science in Computer Science, Minor in Data Science

Stockton, CA

Aug. 2024 – May 2027

PROJECTS

UrbanPic | *Next.js, React, TypeScript, Tailwind CSS, Claude API, Mapbox, PostgreSQL, Prisma, Vercel* March 2026

- Built an AI-powered civic reporting web app that enables residents to photograph urban issues and automatically generate complete 311 reports in under 30 seconds
- Integrated Claude Vision API to classify infrastructure issues (potholes, graffiti, streetlight outages, illegal dumping) with severity ratings and auto-routed reports to the appropriate city department
- Developed a real-time community heat map using Mapbox GL JS with category filtering and spatial indexing to visualize report density across neighborhoods
- Designed and deployed a full-stack application with Next.js API routes, PostgreSQL with Prisma ORM on Railway, and automated CI/CD through Vercel connected to GitHub

Business Brain | *Kotlin, Android Studio, Figma, AI Integration*

January 2026 – Present

- Developed a native Android application using Kotlin that enables users to input and manage business information with an integrated AI chatbot interface
- Designed intuitive UI/UX workflows in Figma, implementing a swipe-based navigation pattern to seamlessly transition between data entry and AI consultation features
- Integrated AI API (e.g., Anthropic) to provide context-aware business analytics and recommendations based on user-submitted data
- Implemented data persistence using Room Database/SQLite to store business information locally and maintain chat history

A Way Out | *Java, OOP*

August 2025 – December 2025

- Collaborated with a team to design system architecture and develop use cases for an immersive platformer style narrative game
- Implemented core game mechanics using Object-Oriented Programming principles in Java, including player movement, physics simulation, and collision detection
- Developed a local file persistence system to save and load game state, enabling progress tracking across multiple play sessions
- Integrated audio functionality using Java sound libraries to enhance player immersion and provide audio feedback for game events

IDTECH MACHINE LEARNING CAMP

iD Tech

June 2020

Intro to Machine Learning

In-Person Camp

- Built and trained machine learning models using Google's Teachable Machine to perform image recognition and classification tasks
- Explored core machine learning concepts including neural networks, data collection, and model training workflows
- Developed console-based Python applications incorporating logic-driven design and computational thinking principles

TECHNICAL SKILLS

Languages: Java, Python, C++, TypeScript, R, GDScript

Frameworks: React, Next.js, Tailwind CSS, Prisma

Developer Tools: Git, GitHub, VS Code, Visual Studio, PyCharm, IntelliJ, Eclipse, Wireshark, Godot Engine, Vercel, Mapbox

Libraries: pandas, PyTorch, NumPy, Matplotlib, acm, scikit
